

Group Decisions

Decision Making Rules

1. We identify and demonstrate the problem we need to decide on formally.
2. All team members must participate in the decision-making. If someone is absent, we postpone it to the next making
3. We identify the principal choice, that is the most common and appropriate choice
4. We list the benefit and costs of this choice
5. Members start to propose alternatives
6. Members should justify their proposition by declaring their benefit and cost
7. The team should decide whether the evidence of declared benefit and cost are valid
8. The team should make sure everyone fully understands the principal choice and alternatives
9. Now the voting process starts, every member has one vote, and they can vote once to their preferred idea
10. Then the votes are counted, the choice with the highest vote is adopted
11. If there is a tie, the team start finding more evidence about the benefit and cost and repeat step 7-10
12. Take actions to implement our choice
